

INFORMATION ON ATEX PRODUCTS SUPPLIED BY GICAM

Gicam is able to supply load cells compliant with the European Directive 2014/34 / EU (relating to equipment and protection systems intended for use in potentially explosive atmospheres) belonging to the following families:

- Compression load cells
- Shear beam load cells
- Central load cells
- Double shear beam load cells and load pins
- Tension/compression load cells

The following diagram provides important information on the type of ATEX marking, the method of protection and the environmental conditions of use.

The load cells produced by Gicam are group II equipment, that is intended to be used in surface plants and industry, therefore excluding mines.

These equipment belong to category 1 (if in AISI), indicating respectively environments with a high probability of explosive atmospheres occurring (1 - the equipment incorporates very high protection measures) or to category 2 (if in aluminum) respectively indicating environments in which during normal activities the formation of an explosive atmosphere is likely (2 - the equipment incorporates high protection measures).

With reference to the aforementioned categories, the cells are suitable for use in environments with risk of explosion due to both the presence of gases, vapors, mists (G) and the presence of combustible dusts (D).

The following table provides a non-exhaustive guide for the association between the equipment category and the [installation area](#).

Category	Installation area
Gas, Vapors, Mists	
1 G	Zone 0 or Zone 1 or Zone 2
2 G	Zone 1 or Zone 2
3 G	Zone 2
Powders	
1 D	Zone 20 or Zone 21 or Zone 22
2 D	Zone 21 or Zone 22
3 D	Zone 22

Based on the constructive characteristics of the load cells produced by Gicam, they can be used in the manner provided for in Article 16 of the EN60079-14: 2014 standard, or relating to the specific conditions of installations of intrinsically safe equipment. An equipment associated with intrinsic safety is therefore always necessary.
